

Flex Capacitor

2p: 5.9, 10c

Base of the Grand Wall

cleaned: J. Frimer, N. Elson, J. Anderson, E. Harding

FA: C. Mortenson, J. Frimer, Aug. 2011

Location: 50m right of *Exasperator*, between *Moving to Montana* and *Java Jive*.

Rack: doubles to 2", singles to 4"

Pitch 1. 5.9. 33m. Scramble up blocks for 5m to the base of a corner. Finger lock up the corner (crux) to easier lackbacking before entering an alcove. Finger lock out the alcove and up a final corner to the bolted belay. (Can rap with 70m rope or 60m rope with short, easy downclimb.) This takes in parts of the first pitch of the old route called *Hangup*.

Pitch 2. 5.10c. 20m. 1.21 Jigawatts needed to send this pitch. Undercling and jam the arch. Use your #4 in the first wide pod. Hand jams through the middle section... then flexy undercling past bolts to the chains. Clip the chains (fixed draws) and lower (at 88 mph?) immediately to the *Java Jive* anchor before belaying the second.
